SKILLS

Engines
Unity (C#) · Unreal Engine 5 (C++/Blueprint)

Languages
C#, C++, Java, C

Gameplay & Systems
Inventory, crafting, building, save/load, day-night, resource management

Multiplayer
Netcode for GameObjects, Steam OSS, state sync

AI
Behavior Trees & Blackboards (custom nodes)

Procedural Gen
Procedural grids, endless / infinite levels

UI / UX
HUD & gameplay UI, custom elements, localization

Performance
Object Pooling, Data Tables, LODs, memory optimization

Practices
SOLID, design patterns, pixel-art

Source Control
Git, Subversion (SVN), Diversion

Tools & Workflow
Jira, Notion, Miro

LANGUAGES

Turkish	Native
English	Professional
Japanese	Beginner

EDUCATION

B.Sc. Computer Engineering
Karabük University · 2020-2024

ACHIEVEMENTS

KBU Game Experts
Nov 2022 – Sep 2024
Selected as 1 of 7 out of 200 students; joined the specialized game-dev group.

Lab Assistant — Karabük University
Nov 2023 – Jan 2024
Appointed by faculty for strong academic performance; supported programming labs.

Yılmaz Tarık İpekçi

GAME DEVELOPER

PROFESSIONAL SUMMARY

Game Developer with 3+ years of hands-on experience across indie studios, shipping titles in both **Unity (C#)** and **Unreal Engine 5 (C++/Blueprint)** — including a released Steam title (**HELLBREAK**). Owns complete gameplay features end-to-end: online multiplayer, AI, procedural generation, save systems, UI/UX, and localization across 10+ languages, with performance gains of up to **2.5x**. Particular strength in simulation and survival games (crafting, resource management, building). Experienced in fully remote international teams; available during CET/CEST office hours.

WORK EXPERIENCE

Hiraru Games — Game Developer Feb 2026 – Present · Remote

- Built a **network-synchronized** cage-soiling system using dynamic materials — cages get progressively dirty and replicate consistently across all clients.
- Developed a **collision-checked decoration system** letting players place decorative props around the environment.
- Added client-side visual effects and performed extensive bug fixing to improve build stability.
- Managed **localization across 10+ languages** and testing across builds.

Visma Games — Game Developer Mar 2025 – Sep 2025 · Remote

- Delivered major systems for a simulation game, including the **Cleaning System** and **Tutorial System** (C++/Blueprint hybrid workflow).
- Implemented AI (**Behavior Trees with custom nodes**), UI programming, save/load, dynamic material logic, and localization across 10+ languages.
- Boosted frame rate up to **2-2.5x** through reduced tick rates, collision simplification, AI optimization, LODs, and texture tuning; used Object Pooling and Data Tables for scalable game data.
- Resolved both legacy and newly introduced bugs across the codebase.

Double Barrel Games — Game Programmer Jun 2023 – Feb 2025 · Remote

HELLBREAK (released on Steam) · Promoted from part-time to full-time for consistent performance

- Built the game's **HUD and core UI** (C++/Blueprint): off-screen enemy direction indicators, health bar, collected-souls counter, and a skill cooldown system with its UI.
- Fixed enemy movement and ability bugs and refined gameplay responsiveness across iterative feature expansions.
- Contributed through the full lifecycle: **demo production, launch, and post-release support**.

Tigloos Games — Game Programmer Intern Jul 2024 – Aug 2024

- Built a **procedural-grid chessboard system** in Unreal Engine 5 (C++/Blueprint) with rule-based spawning and state control.
- Prototyped an RTS featuring resource management, modular building placement, unit control, and Behavior Tree AI.

Veri Bilgi Merkezi — Software Engineer Intern Jul 2023 – Aug 2023

- Built an RPA tool automating criteria-based data extraction (auto-login, dynamic scraping) with structured Excel export.

SELECTED PROJECTS

Co-Op Survival · Unity — 2D online co-op zombie survival. Synchronized 4-player multiplayer (Netcode for GameObjects), dynamic wave spawning, diverse enemy AI, and an upgrade mechanic on a clean SOLID architecture. [GitHub]

Co-Op Survival (Senior Project) · Unreal Engine 5 — Third-person co-op survival with inventory, crafting, building, day-night cycle, and AI. Steam OSS synchronized multiplayer for up to 4 players, plus a full HUD/UI. [GitHub]

Ranch Gallop · Unity — 3D endless runner with a procedurally generated infinite level, save system, and optimized tile destruction. Runs on both PC and mobile. [GitHub]

Tower Defense · Unity — Customizable wave system, multiple animated enemy types, and upgradeable/sellable turrets focused on strategic depth and balance. [GitHub]

Animal Match · Unity — Match-3 puzzle with special tile interactions (dynamite, four-leaf clover) and a save system tracking best scores and level completion. [GitHub]

Fox's Tale · Unity — 2D pixel-art platformer with double jump, dash and enemy-bounce controls, boss fights, checkpoints, and custom pixel UI. [GitHub]
